

Site Aggregation (Integrate on-premises Citrix Virtual Apps and Desktops (CVAD) with Cloud Workspace)

Go to **Citrix Cloud**, select **Workspace Configuration** in the left menu.

Select **Sites**

← Home > Workspace Configuration

Workspace Configuration

Access Authentication Customize Service Integrations **Sites** Service Continuity App Configuration (Beta)

 The Sites feature is currently disabled. To enable Sites, please go to the Service Integrations tab or [click here](#).

No sites added

Add your on-premises Sites to Citrix Cloud so you can deliver apps with Citrix Workspace.

 To support Azure Active Directory, please enable Trust XML requests within your on-premises sites.

Select **Type of site** based on your on-premises site version

Access Authentication Customize Service Integrations **Sites** Service Continuity App Configuration (Beta)

 The Sites feature is currently disabled. To enable Sites, please go to the Service Integrations tab or [click here](#).

[Cancel](#)

^ Select type of Site

In order to successfully add your Site, we need to know the version that you're currently using on-premises.

☒ Virtual Apps and Desktops (Formerly XenApp and XenDesktop)

 Some versions of Virtual Apps and Desktops are conditionally supported for Workspace Site aggregation. [Learn more](#)

☐ XenApp 6.5

[Continue](#)

Enter the **FQDN** of one of your XML controllers. Citrix Cloud will be able to resolve your local network with the Cloud Connector software.

Discover XenApp and XenDesktop Site

For Citrix Cloud to discover your XenApp and XenDesktop Site, we need you to choose a Resource Location with connectors. Connectors in the Resource Location will be used to talk to your on-premises Controllers.

Select a Resource Location ⓘ

<input type="radio"/> RL - East US	2 connectors installed
<input checked="" type="radio"/> On-Premises	1 connector installed
<input type="radio"/> My Resource Location	2 connectors installed

[Add new Resource Location](#)

Enter Server Address ⓘ

Discover

✓ Success! We found the site XD7-SITE-CITRIXGURU ✕

Continue

Note :

After providing XML server, you may get below authentication prompt if you have not created Cloud Connector security group. In case, if cloud connector security group is created and provided Read only permission in on premises CVAD site then below prompt will not appear.

⚠ Please enter your Virtual Apps and Desktops site credentials

Citrix Cloud will only use these credentials on a read-only basis.
No changes will be made to your site.

<input type="text" value="Username"/> domain/username	<input type="text" value="Password"/>
--	---------------------------------------

Continue

Cancel

Citrix Cloud will validate the connection and retrieve your XenDesktop site.

Next step is to **validate the Active Directory connection**.

Verify Active Directory Connection

You currently have apps published to users in the following domains. If domains don't include connectors, users from that domain will not be able to login to Citrix Workspace.

Continue

Then the gateway. Here we will **use the Gateway Service** (Gateway service need to be chosen based on requirement)

Configure Connectivity

☐ Traditional Gateway

☒ Gateway Service

☐ Internal Only | No external connectivity is set up

☒ I understand that high availability requires having two connectors installed in a resource location.

Continue

Confirm Site Aggregation

Review and save the configuration for your Citrix Workspace. You can modify the site at any time.

XML Port

80

Netscaler Gateway Service

Site Aggregation is configured

After adding your first site, you must enable the **Service Integration** for Virtual Apps and Desktops on-premises sites, which is disabled by default. Subscribers can't see resources from the site until you enable it.

1. Navigate to **Workspace Configuration > Service Integrations > Virtual Apps and Desktops On-Premises Sites** and select the ellipsis to open the site actions menu.
2. Enable the service integration so that subscribers can sign in to their workspaces and see resources from the site.

Logon Citrix cloud workspace and you should be able to see on premises apps & citrix workspace apps in one UI (Citrix Workspace App)
